

ABSTRACT

At least, a priority P of a connection for each wireless system, and a connection initiation wireless-link
5 quality threshold Q1 are set and kept in a wireless terminal as a connection policy by the user wireless system by wireless system. Also, notified information received from the wireless systems enables these kinds of the information to be set dynamically. The wireless
10 terminal selects and connects to the wireless system in the order of a high priority, out of the wireless systems of which the wireless link quality is equal to or more than Q1, and of which a flag F1 was set to ON.
